

Enterprise-Grade Shared Inbox, No-Code Cognitive AI Automation, and Live CRM Integrations built on the Official Meta WhatsApp Business API.

🔗 WhatsApp Partner Ecosystem

🔒 Secure & Scalable

✓ One-Time Setup (\$350) + \$70/mo

The Cost of Fragmented Communication

THE FRICTION

Operational Bottlenecks

Single-agent phones create massive operational bottlenecks. Your support team is juggling inquiries from one screen, creating blind spots for team leaders and scaling failures.

Missed Opportunities

Inquiries arriving outside of local business hours go unanswered. Customers demand instant answers, and a 12-hour delay means they immediately leave for competitors who respond.

Disconnected Data Silos

WhatsApp conversations happen on isolated devices while order bookings and customer notes exist in separate systems, requiring slow, error-prone manual copy-pasting.

Whatlify Unified Ecosystem

THE SOLUTION

Shared Team Workspace

Connect your entire staff to a single official WhatsApp business line. Easily assign chats to agents, set availability status, and collaborate internally using private notes.

Cognitive AI Engine

Scale answering capabilities using secure OpenAI/Gemini agents trained on your documentation. Build structured interactive journeys using our no-code drag-and-drop canvas.

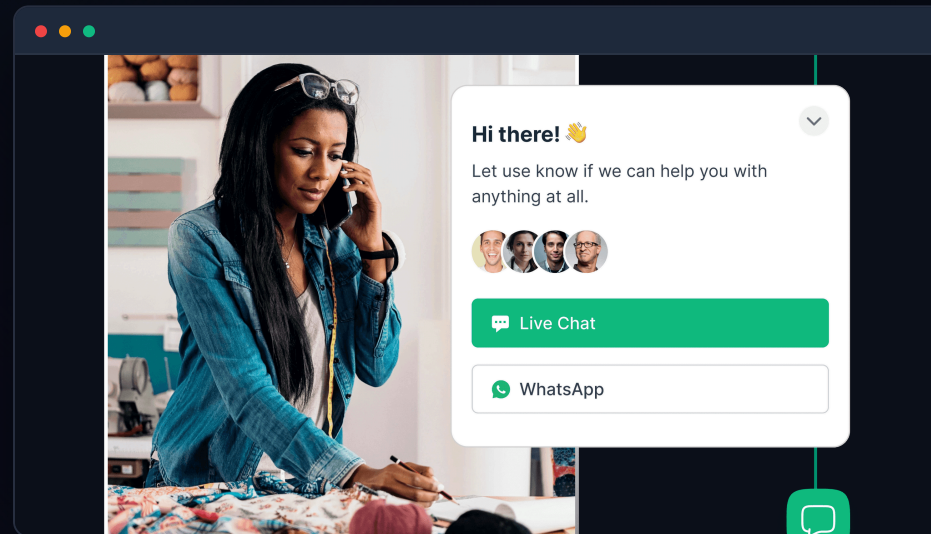

Real-Time Database Sync

Streamline operational data. Automatically extract buyer names, shipping details, and items from chat, then sync directly to orders, pipelines, and external platforms (Shopify, Sheets).

Collaborative Shared Inbox

TEAM OPERATIONS

- ✔ **Unified Brand Access**
Run multiple agents, support teams, and departments off a single verified WhatsApp line simultaneously.
- ✔ **Private Collaborative Threads**
Leave internal yellow-coded notes directly inside customer chat boxes to sync with coworkers before drafting replies.
- ✔ **Dynamic Lead Labeling**
Tag contacts with customizable status labels to keep VIPs, sales deals, and support tickets neatly sorted.

No-Code Visual Automation Engine

AI ARCHITECTURE

Drag-and-Drop Node Canvas

Easily build decision logic. Wire incoming WhatsApp triggers directly to AI logic boxes and backend updates.

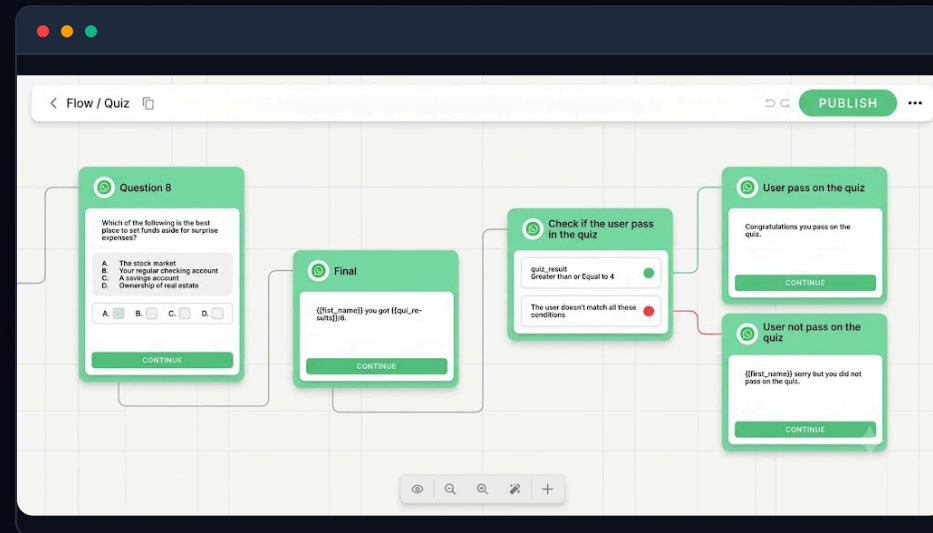

Contextual Knowledge Training

Instruct your AI agent using raw text, brochures, guidelines, or databases to deliver human-like responses.

Embedded Testing Sandbox

Interact with and fine-tune your workflows inside our real-time testing console before going live.

Automated Order Logging & Sales CRM

DATA & INTEGRATIONS

AI Entity Extraction

Cognitive bots extract buyer details (quantities, names, physical addresses) straight out of conversation logs.

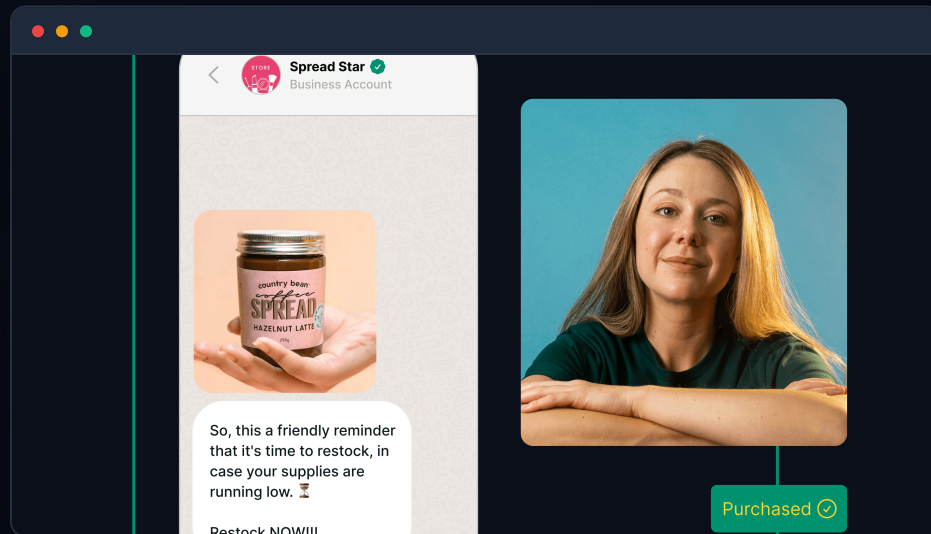

Automated Sales Pipelines

Track and nurture chat leads through structured Kanban stages to optimize conversions.

Real-Time Sync & Webhooks

Issue live alerts to dashboard admins and dispatch transactions instantly to local databases.

Meta-Approved Marketing & Analytics

MARKETING ROI

Interactive Broadcast Templates

Design rich media layouts with click-to-action links and quick-replies that comply with Meta standards.

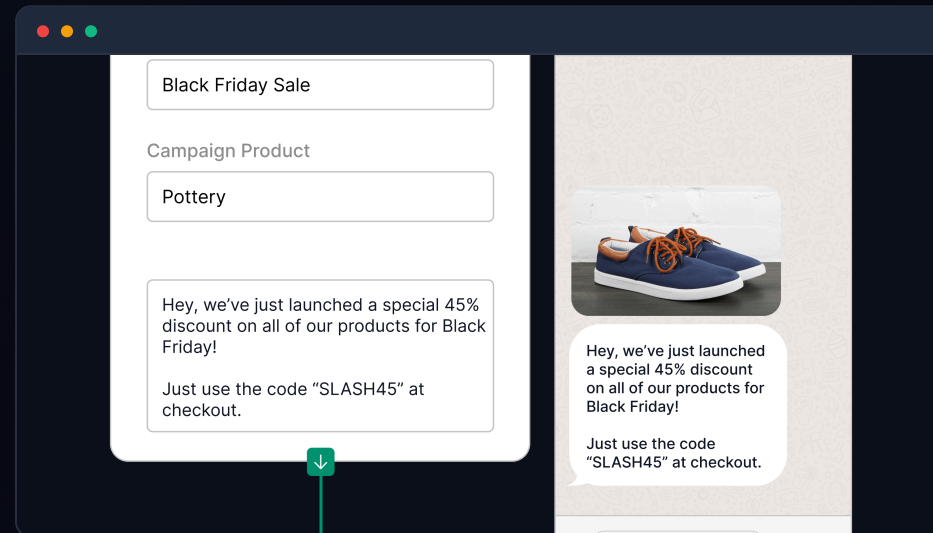

Targeted Customer Segments

Filter lists by customer tags (e.g. VIP, abandoned cart) to deliver highly personalized promotions.

Campaign Delivery Insights

Track real-time statistics including messages sent, successfully delivered, read, and replied.

Secure, Multi-Tenant Architecture

ENTERPRISE GRADE

Security

Workspace Isolation

Each branch, department, or company operates in a containerized tenant environment. User data, configurations, and conversation databases are strictly isolated.

Meta API

Official Cloud Endpoints

Fully compliant communication layer direct to official Meta APIs. No unofficial browser scripts, ensuring your WhatsApp numbers avoid risk of compliance bans.

Controls

Token & Temperature Control

Encrypt and secure credentials (like OpenAI keys). Calibrate bot temperatures and responses directly to restrict hallucinations and guide operational styling.

Streamlining Your Digital Transformation

IMPLEMENTATION TIMELINE

Meta Verification

We manage the Meta Business verification process and configure your developer portals.

Workspace Sync

Establish secure tenants, create agent credentials, and configure visual canvas triggers.

AI Training

Upload catalog guidelines, FAQs, and train AI models to mimic brand guidelines.

Go-Live Support

Deploy workflows, monitor live orders, and optimize routing dynamically.

Transparent Pricing, Built for ROI

PRICING MODEL

Unified Whatlify Package

Complete setup, business verification, visual workflow engineering, and ongoing cloud hosting.

\$350 Setup + **\$70**/mo

Covers server maintenance & standard messaging volume

+ One-Time Onboarding Setup (\$350)

- ✓ Full support for official Meta WhatsApp Business API integration.
- ✓ Verification handling & developer account setup (Meta Business Manager).
- ✓ Bot behavior mapping, knowledge document ingestion, and canvas setup.

+ Ongoing Maintenance Subscription (\$70/mo)

- ✓ Standard message traffic costs and LLM processing limits covered.
- ✓ Unlimited human agent logins to the collaborative team inbox.
- ✓ Continuous CRM database synchronization and dashboard tracking.
